INNOVATIVE management of your OLIVE GROVE

OLIWES®

POWERED BY AGRICOLUS®

FORECAST MODELS

TASK MANAGEMENT

CROP SCOUTING

FIELD MAPPING

INTEGRATED IN A SINGLE PLATFORM TO

1. Monitor and optimize management cost and production processes
2. Prevent the spread of pest and diseases
3. Simplify the work on field assigning tasks to coworker
4. Reduce the use of water
5. Monitor the olive grove, even remotely
6. Improve environmental sustainability

OLIWES FEATURES

CROP SCOUTING – MOBILE APP

Pests and Diseases: geolocate quickly and easily specific problems of the olives.

Traps and Catches: geolocate traps and monitor insect trend during the season.

Phenology: register your observations which will be integrated into the forecast model.

Soil Analysis: geolocate your soil analysis results.

Crop Damages and Issues: register general problems of the farm and damages in the olive grove that need to be solved.

TASK MANAGEMENT

Create and Assign tasks to be done in the farm to your collaborators in real time.

Register Where, How and When crop operations have been carried out (irrigation, treatments, fertilization).

FORECAST MODELS

Prediction of Phenology to assess olive grove needs in each development stage.

Evaluation of Water Requirements to carry out irrigation when necessary with the right amount of water.

Prediction of Infestation to assess the risk of pest (Olive fruit fly) and act promptly.

FIELD MAPPING

Draw Or Import one or more fields to hook all the features.
